Scan, Project, & Filter

Implementations

- Scan – Sequential scan or index lookup
- Project – Take desired columns
- Filter – Conditional test

- Potentially combine with other operations.

Filter tests combined with AND

```
SELECT *
FROM Person
WHERE name IN ('Greiner', 'Halverhout') AND
      zipcode = 77055 AND
      birthdate > '1967-02-12';
```

- Short-circuiting
- Reordering can be more efficient.
