ERD Implementation:
1-1 Relationships

1-1, semantically same key

Almost always poor design.

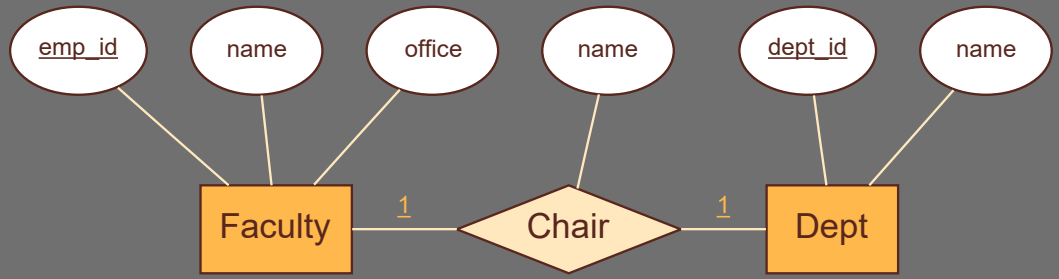

Better: Single entity set.
Player(id, name, address, points)

Main exceptions:

- Different security
- Legacy vs. new
- Common vs. rare use

I.e., the entity sets are somehow different.

1-1, semantically different keys

Sometimes indicates a poor design.

Faculty(emp_id, name, office, dept_id)

Dept(dept_id, name, emp_id, chair_name)
