Integrating DB & Application: Simple API

Build SQL as strings

```
String query = "SELECT " + colname + " FROM " + tablename;
ResultSet result = stmt.executeQuery(query);
```

Demo: Simple API

- Show query construction, call, and return in Python and Java code examples.

Pros & Cons

☺ Minimal API learning curve
☺ Can use any SQL

☹ Requires knowing SQL
☹ Can send incorrect or dangerous SQL – no checking
☹ Must edit SQL strings when porting to other RDBMS
