Neo4J Data Integrity & Concurrency

Few constraints

- Duplicate nodes allowed – PK mostly hidden
- Duplicate edges allowed

- No
  - FKs, uniqueness, or other constraints
  - Triggers

Transactions

Single query

Can implicitly combine transactions

Isolation levels

Isolation level	Dirty reads	Unrepeatable reads	Phantom reads	Default in
Read uncommitted	Allowed	Allowed	Allowed	
Read committed	Not allowed	Allowed	Allowed	Most, including PostgreSQL
Repeatable read	Not allowed	Not allowed	Allowed	MySQL
Serializable	Not allowed	Not allowed	Not allowed	ANSI standard

ACID vs BASE, CAP?

ACID with an emphasis on AC

Why use Neo4j?

Data model & querying very graph-oriented!

ACID
