

Query Syntax & Semantics (updated)

Syntax summary

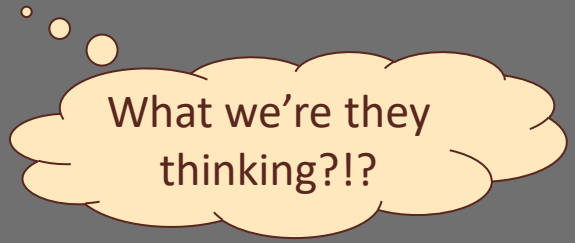

```
SELECT [DISTINCT] Computations
FROM      Table0
   INNER JOIN Table1 ON JoinCond1
   …
WHERE     FilterCond
GROUP BY  Attributes
HAVING    GroupFilterCond
ORDER BY  Computations
LIMIT     n;
```

Can use attributes & aggregates.

Semantics summary

```
SELECT [DISTINCT] Computations
FROM      Table0
   INNER JOIN Table1 ON JoinCond1
   …
WHERE     FilterCond
GROUP BY  Attributes
HAVING    GroupFilterCond
ORDER BY  Computations
LIMIT     n;
```

5. Computations, [eliminate duplicates]
1. Joins
2. Filter rows
3. Group by attributes
4. Filter groups
6. Sort
7. Use first n rows

Example

```
SELECT   SUM(p.purch_price * p.purch_quan) AS total
FROM     Purchase AS p
WHERE    p.purch_price > 1::MONEY
GROUP BY p.purch_product
HAVING   COUNT(*) > 0
ORDER BY total
LIMIT    1
```

5. Computations
1. Get & join data
2. Filter rows
3. Group by attrs
4. Filter groups
6. Sort
7. Use first n rows
