Pipelining

What is pipelining?

- Ops run concurrently.
- Stream data via shared buffer.

When can child pipeline to parent?

Each output tuple only used once.

- Only one parent of that child.
- Parent only reads each tuple once.

```
For r in R:
    For s in S:
        If r.a == s.a, yield (r,s)
```
