Inmon's information factory

Focus on subject areas

Summary

Kimball-style

- Stores raw denormalized data direct from sources
  - Often dimensional model
  - Easier to design & create.
  - Harder to use.
- Access & views focus on processes
  - How data is used

Inmon-style

- Stores cleaned up, normalized data
  - Often ER model
  - Harder to design & create
  - Easier to use
- Access & views focus on subject areas
  - What data is accessed
  - Often better match with security restrictions (e.g., FERPA, HIPAA)
